# Statement of Limitations

This document has been prepared in response to specific instructions from Port of Brisbane to whom the report has been addressed. The work has been undertaken with the usual care and thoroughness of the consulting profession. The work is based on accepted standards, practices of the time the work was undertaken. No other warranty, expressed or implied, is made as to the professional advice included in this report.

The report has been prepared for the use by Port of Brisbane and the use of this report by other parties may lead to misinterpretation of the issues contained in this report. To avoid misuse of this report, Prensa advise that the report should only be relied upon by Port of Brisbane and those third parties where the purposes for which the third parties intend to use the report are the same as those of Port of Brisbane. The report should not be separated or reproduced in part and Prensa should be retained to assist other professionals who may be affected by the issues addressed in this report to ensure the report is not misused in any way.

Prensa is not a professional quantity surveyor (QS) organisation. Any areas, volumes, tonnages or any other quantities noted in this report are indicative estimates only. The services of a professional QS organisation should be engaged if quantities are to be relied upon.

## **Reliance on Information Provided by Others**

Prensa notes that where information has been provided by other parties in order for the works to be undertaken, Prensa cannot guarantee the accuracy or completeness of this information. Prensa does not warrant the accuracy or completeness of this information and does not accept liability arising from inaccuracies or omissions in information provided to Prensa by third parties. No indications were found during our investigations that information contained in this report, as provided to Prensa, is false.

## **Recommendation for Further Study**

The industry recognised methods used in undertaking the works may dictate a staged approach to specific investigations. The findings therefore of this report may represent preliminary findings in accordance with these industry recognised methodologies. In accordance with these methodologies, recommendations contained in this report may include a need for further investigation or analytical analysis. The decision to accept these recommendations and incur additional costs in doing so will be at the sole discretion of Port of Brisbane and Prensa recognises that Port of Brisbane will consider their specific needs and the business risks involved. Prensa does not accept any liability for losses incurred as a result of Port of Brisbane not accepting the recommendations made within this report.

## 1 Introduction

Prensa Pty Ltd (Prensa) was engaged by Port of Brisbane to undertake a Confined Space Assessment (CSA) of fourteen (14) vessels located at 18 Howard Smith Drive, Port of Brisbane, QLD 4178. The CSA was undertaken by Prensa on 22<sup>nd</sup> of April, 14<sup>th</sup> of May and the 22<sup>nd</sup> of May 2026, with the assistance of Warren Angland, Senior Manager for Port of Brisbane.

## 2 Objectives

The objectives of the CSA were to:

- Establish the current level of risk and compliance of the vessels in relation to confined spaces, in general accordance with the relevant legislation, regulations, codes of practice/compliance codes and Australian Standards;
- Provide practical recommendations to rectify identified non-compliances associated with confined spaces (if any) and reduce the risk where deemed appropriate; and
- Present the findings in a concise and usable form, in order to assist Port of Brisbane in effective and ongoing risk management of the vessels.

## 3 Scope of Works

The scope of the CSA was defined by Port of Brisbane and covered certain nominated vessels under the management of Port of Brisbane.

## 4 Methodology

The CSA was undertaken in accordance with the following methodology:

- Discussions with relevant Port of Brisbane personnel and site contacts;
- A visual inspection, and detailed walked through of the nominated vessels managed by Port of Brisbane, in order to identify confined spaces present;
- Identification of the potential hazards and current risk controls (e.g. security, signage) associated with those confined spaces; and
- Documentation and compilation of the findings, including preparation of a confined spaces register and risk assessment.

## 5 Technical Framework

The following documents were referred to when completing the CSA:

- QLD Work Health and Safety Act (2011) and Regulation (2011) (WHS Act/Regulation);
- QLD Code of Practice for Confined Spaces 2021;
- AS 2865 – 2009, Confined Spaces;
- Model Code of Practice: *Confined Spaces* November 2024; and
- Applicable Port of Brisbane confined space management procedures.

## 6 Identification of Confined Spaces

### 6.1 Definition of a Confined Space

A **Confined Space** is defined as an enclosed or partially enclosed space which:

- Is not designed or intended primarily to be occupied by a person; AND
- Is, or is designed or intended to be, at normal atmospheric pressure while any person is in the space; AND
- Is, or is likely to be a risk to health and safety from:
  - An atmosphere that does not have a safe oxygen level; OR
  - Contaminants, including flammable airborne gases, vapours and dusts that may cause injury from fire or explosion; OR
  - Harmful concentrations of any airborne contaminants; OR
  - Engulfment.

The above description is hereafter referred to as the Confined Space Criteria.

### 6.2 Register of Confined Spaces

To enable persons accessing the vessels to be aware of the confined spaces present, a Register of Confined Spaces has been prepared and is included as **Appendix A**. The Register of Confined Spaces contains the following information:

- Location of the confined space;
- Type of confined space (e.g. sewage tank, void spaces, fresh water tank);
- Method(s) used to secure the confined space from unauthorised access;
- Confined Space Criteria deemed applicable; and
- A photograph of the confined space.

The Confined Space Register has been designed to facilitate the identification of those spaces that should be classified as a "confined space", by both the person who has control or management of the vessels as well as persons who may be accessing the vessels.

### 6.3 Provision of Confined Space Labelling

While there is no legislative duty to install confined space signage for non-entry situations, it is the intent of Port of Brisbane to manage the potential confined space entry risk through such signs.

Signage should be durable and weather resistant and used to notify that entry should not take place unless a Confined Space Permit has been obtained. Signage is also used to:

- Communicate to crew, contractors and others that the area presents a specific risk; and
- Reduce the risk of unauthorised entry.

Where labelling is impractical e.g. for aesthetic reasons, the method of identification will be via use of this confined space register.

Figure 1: Examples of Confined Space Signage

## 6.4 Limitations

The ability to identify confined spaces during this CSA was limited to information provided by Port of Brisbane and a visual inspection of reasonably accessible areas of the vessels. Due to the limited access restricting some of the hatches of void spaces to be opened during the inspection periods, spaces were assessed against the Confined Space Criteria based only on information provided by Port of Brisbane representatives where necessary, and assumptions made based on the surrounding use of the spaces, markings on metal hatches, etc.

## 7 Risk Assessment

A risk assessment must be conducted by a competent person or persons before conducting any tasks associated with a confined space, in accordance with AS 2865, *Confined Spaces*, 2009. In order to adhere to this requirement, risk assessments are to be completed by personal accessing confined spaces on the vessel prior to entry.

## 8 Hierarchy of Controls

Prensa has utilised the hierarchy of control in order to rank confined space hazards and subsequent recommendations. The State based WHS / OHS Regulations require that duty holders utilise the most effective method to eliminate or minimise risk, taking into consideration what is reasonably practicable. The hierarchy of control deems the elimination of risk as being the highest level of control, for example, eliminating the need to enter a confined space. The lowest level of control is the utilisation of administrative controls and PPE.

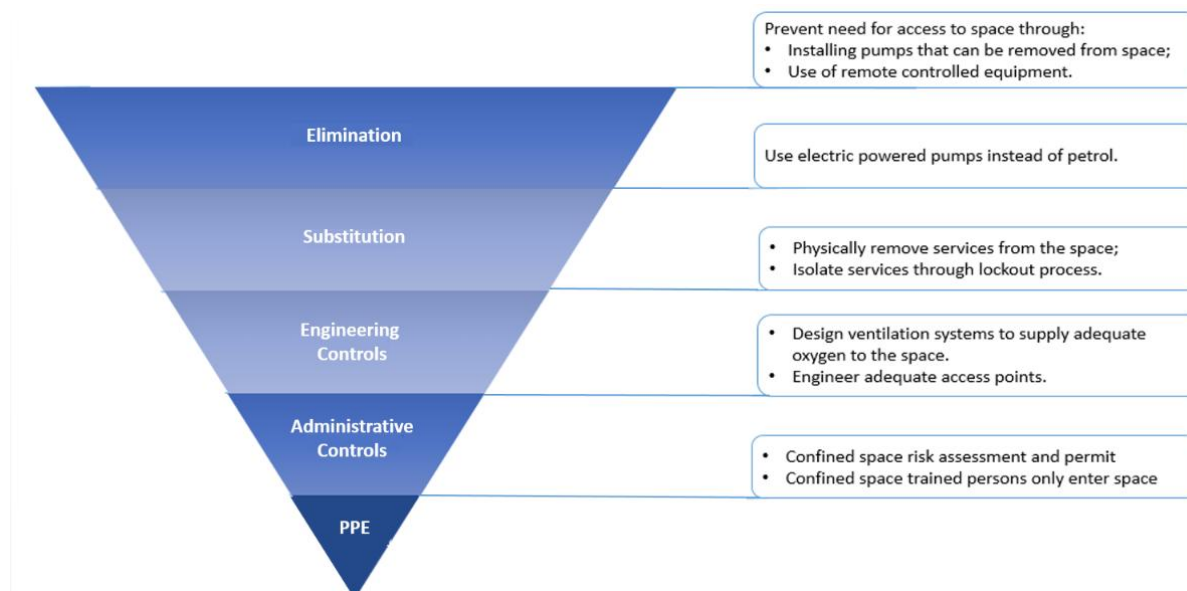

Figure 2: Hierarchy of Controls

## 9 Entry into Confined Spaces

Where entry to a confined space cannot be avoided, a representative of Port of Brisbane must undertake the following prior to allowing a crew member or other person to enter the confined space:

- Review risk assessments completed by the person prior to entering the confined space;
- Review risk controls planned by the person; and
- Review the personnel training and competency record.

As the duty holder (Person Conducting a Business or Undertaking, Employer, etc.) in control of the confined space, it is also necessary to ensure that any person requiring entry to a confined space on the vessels:

- Provides evidence of compliance with Port of Brisbane confined space entry and documentation requirements, as follows:
  - Prior to entry to a confined space the person MUST:
    - Document a site-specific confined space entry risk assessment;
    - Document a safe work method statement (or equivalent);
    - Document emergency rescue arrangements; and
    - Complete a confined space permit that is, as a minimum equal to, or better than the permit to work approved for use by Port of Brisbane.

- During entry to a confined space the person MUST:
  - Allocate a stand-by person, who is able to remain for the duration of entry;
  - Monitor the atmosphere within the confined space;
  - Provide equipment necessary for the initiation of emergency response and rescue of persons from the confined space; and
  - Provide signage and barricading.
- At the completion of works the person MUST:
  - Ensure all equipment taken into the confined space is removed and accounted for;
  - Replace any access locks / hatches as necessary to prevent entry by unauthorised persons;
  - Provide completed confined space entry permit to Port of Brisbane; and
  - Remove temporary signage and barricading.

## 9.1 Information, Instruction and Training

Evidence of training in confined space entry must be reviewed for the persons entering a confined space and the person acting in the stand-by role. This should include retaining copies of training on file for future reference. This should include demonstrating competencies in nationally recognised courses such as:

- RIIWHS202D - *Enter and work in confined spaces*;
- MSMPER205 - *Enter confined space*;
- MSMPER200 - *Work in accordance with an issued permit*;
- MSMPER202 - *Observe permit work, etc.*

## 9.2 Confined Space Entry Permits

Port of Brisbane must ensure that a confined space entry permit is issued for each confined space entry and must:

- Be in writing;
- Identify the confined space;
- Clearly describe the work to be carried out in or on the confined space;
- Set out measures to control risks for the confined space;
- Record the names of all persons who may enter or work in or on the confined space; and
- Record the dates and times when the persons may enter or be in or on the confined space to carry out the work.

## 9.3 Record Keeping

The following records should be retained by Port of Brisbane:

- Confined space register for the vessels; and
- Where entry is required to a confined space:
  - Copy of pre-entry risk assessment conducted by the person entering the space;
  - Copy of the SWMS defining risk controls prior to work being undertaken;
  - Copies of completed confined space permits;
  - Records of training in confined space entry; and
  - Records of review of contractor documents.

## 10 Findings

A Register of Confined Spaces is contained within **Appendix A** of this report.

**Confined spaces** of the following types were identified:

| Table 1: Types of Confined Space Identified on the Vessels |                   |
|------------------------------------------------------------|-------------------|
| Ballast Tank                                               | Boat Hull         |
| Diesel Tank                                                | Fresh Water Tank  |
| Fuel Tank                                                  | Pivot Shaft Space |
| Steering Compartment                                       | Tiller Flat       |
| Void Space                                                 |                   |

During Prensa's Assessment, all spaces were physically secured through the use of metal hatches and full metal covers. The following vessels were also inspected as part of the assessment, however, were not deemed to contain compartments to be classified as confined spaces;

- Investigator.

An anchor well was inspected as part of this Confined Spaces Assessment. This included on the vessels Jim Peel. These spaces were not considered to be confined spaces by definition but still present with some hazards and should be considered as restricted spaces. While it is understood they are rarely if ever entered by personnel, where entry is required (e.g. during maintenance) a risk assessment should be carried out, with the appropriate precautions taken.

It is noted that maintenance works were being undertaken on the vessel the 'Hercules'. As such, the confined space labelling could not be observed on the metal plates and covers. Additionally, the vessel 'The Brisbane', was not inspected as it was not accessible at the time of the Assessment.

## 11 Recommendations

The following recommendations are raised in order to further reduce the risk associated with the management of confined spaces on the vessels:

- Provide consistent permanent labelling stating 'Danger – Confined Space, entry by permit only', or similar, to the following unlabelled confined spaces detailed in **Appendix A**;
  - Jila I:
    - Void Spaces.
  - Jila II:
    - Void Spaces.
  - Hercules:
    - Void Spaces.
  - Nautilus:
    - Void Spaces.
  - Ken Harvey:
    - Ballast Tanks;
    - Void Spaces; and
    - Sewage Tank.
  - Sampson:
    - Void Spaces.
  - Scylla:
    - Void Spaces.
